PROFESSIONAL SUMMARY

Senior UX / Product Designer with 9+ years turning complex business needs into simple, buildable products for B2B SaaS and AI. A rare mix of research, design and code: started in graphic design, moved into UI engineering, and now lead UX, including managing a 28-member team. Most recently owned the design of **Open Weaver Studio**, an AI website builder used by 1,000+ businesses.

CORE SKILLS

UX Research: User interviews, usability testing, competitor analysis, user personas, journey mapping, information architecture

Product & UI Design: User flows, wireframing, high-fidelity UI, interaction design, visual design, interactive prototyping, responsive web & mobile, dashboards & data visualisation

Design Systems: Design tokens, theming, component libraries, Figma variables & auto layout, developer handoff

Front-end: HTML5, CSS3, JavaScript, jQuery, React (basic), design-to-HTML, WordPress (Elementor, Beaver Builder), Drupal, REST API integration, cross-browser QA

Tools: Figma, FigJam, Figma AI, Figma Make, Claude Code, Photoshop

Domain: B2B SaaS, AI products, no-code website builders, HR & finance tools, banking, insurance

Leadership: Managing large teams, performance appraisals, work planning, mentoring, cross-functional collaboration with product managers and engineers

EXPERIENCE

Senior Specialist
May 2023 – Oct 2026

Open Weaver India Pvt Ltd, Chennai

- Owned the end-to-end design process for Open Weaver Studio, an AI website builder used by 1,000+ businesses, from onboarding and website generation to payment, domain and go-live.
- Coordinated and executed competitor analysis of Framer, Webflow, Wix Studio, Bubble, Durable and Canva, built personas and conducted user interviews; used the findings to upgrade plain-text AI content to generation tailored to each business, with one-click regenerate.
- Designed the no-code/low-code editor, where customers can edit every section of their site, including the UX for every widget's settings.
- Designed 600+ website sections across categories such as hero, header and about, with multiple layout variations in each, so every generated website looks different.
- Designed the Studio landing page and the full canvas editor, from low-fidelity wireframes to high-fidelity designs.
- Built the design system, component library and theme generation system, and handled developer handoff.
- Worked directly with clients to understand their business use cases and turn them into product requirements.
- Led a team of 8, working with product managers and engineers on scope and trade-offs.
- Used Figma AI, Figma Make and Claude Code to explore and prototype faster.

UI/UX Designer
Jan 2021 – May 2023

CEM Business Solutions, Chennai

- Designed SaaS business tools for clients across industries, covering HR (employee management), finance and payroll, and invoicing.
- Designed data-heavy dashboards and key screens: KPI cards, charts, pipeline views and requisition tables, so managers see status at a glance.
- Created wireframes for web and mobile applications, developed them into high-fidelity UI designs, and supported developers through handoff and build.
- Played a key role in hand-coding responsive landing pages and email templates in HTML/CSS.
- Designed presentations, social media promotions and holiday greeting mailers for US clients.

UI Engineer (Design & Front-end), Team Lead

Mar 2017 – Sep 2020

Xerago E-Biz Solutions, Chennai

- Managed a 28-member UI team: planned and delegated work, reviewed quality, ran performance appraisals, and delivered campaigns from design handoff to launch.
- As a design-cum-developer: designed UIs, built them in HTML, CSS, JavaScript and jQuery, and developed sites in WordPress (Beaver Builder, Elementor) and Drupal.
- **Banking:** email campaigns for Citibank and pre-login web pages for Noor Bank.
- **Noor Bank (Dubai, onsite):** worked at the client's office for 3 months on design and development support through to handover, with excellent client satisfaction.
- **Insurance:** the complete bike and car insurance purchase flow for Royal Sundaram.
- **NGO:** pre-login and post-login website pages for World Vision.
- Integrated REST APIs for clients with a backend, and set multi-browser and multi-device QA standards.
- Drove talent sourcing and evaluation, and mentored junior designers and developers on UI standards and front-end best practices.

Graphic Designer (Freelance)

2014 – 2017

Self-employed

- Designed and built HTML pages and email templates, and Magento-based e-commerce stores with front-end support.
- Designed logos, social media banners, emailers and brochures for small businesses.

SELECTED CASE STUDIES

Open Weaver Studio — AI website builder

View live product ↗

> **PROBLEM** Small business owners need a website, but agencies cost time and money, and DIY builders still need design and technical skills.
>
> **SOLUTION** The owner enters a business name and description; AI generates six single-page websites, each with its own theme. They pick one, connect their own or a new domain, pay monthly or yearly, and go live immediately. A no-code editor lets them make changes, the site can grow into an online store, and a dedicated developer monitors and supports each site.
>
> **MY ROLE** Research, end-to-end UX and UI, the no-code editor, the design system and handoff.
>
> **RESULT** 1,000+ businesses published their websites with no coding, quickly and at lower cost.

Studio Theme System

View case study ↗

> **PROBLEM** The six websites generated for one business can't look alike; each needs its own typography, colours and light or dark look.
>
> **SOLUTION** 57 themes mapped to business categories; the system picks six different themes automatically. Each theme sets primary, secondary, text and surface colours with light/dark presets; display, heading and content fonts scaled from one base size (e.g. 16 px); and widget styles (shadow, border, corners). Owners can switch to a custom theme for their brand colours.
>
> **MY ROLE** Colour mapping, the type scale, the full theme set, the theme picker and the custom theme flow.
>
> **RESULT** Each of the six websites gets its own personality, components stay consistent, and owners can still make it their own.

EDUCATION & CERTIFICATION

B.E., Computer Science & Engineering 2013

Web Designing & Responsive Web Design — Internet Academy (W3C Member), Bangalore 2014
